

ARCU Third Party Loan Integration™

A Comprehensive View of All Loan Data

A Comprehensive View of All Loan Data

BUSINESS VALUE

- Improve Operations
- Save Money
- Enhance Service

COMPATIBILITY

- Episys®

The key to making well-informed, data-driven decisions is having all pertinent information available. Advanced Reporting for Credit Unions™ (ARCU) provides Episys® clients with a central data repository for viewing crucial business drivers and making fact-based decisions.

ARCU Third Party Loan Integration is an optional feature for ARCU users that combines loan data stored in other processing systems with the Episys loan data stored in ARCU. This offers decision makers a comprehensive view of your credit union's loans.

IT WORKS LIKE THIS . . .

An administrator or a job scheduler places third-party loan files in a designated folder on the ARCU server. The files are transferred with FTP, SFTP, or moved manually. Once ARCU receives the file, an import and mapping service picks it up, reads the contents, and writes the information to a table in the ARCU database.

The nightly ARCU transform-and-load process combines this information with Episys loan data. The data are integrated throughout ARCU, including the ARCU databases and analytic cube. This enables all key loan data to be viewed on standard ARCU reports, including dashboards. The added data are purged on the same schedule as Episys loan data.

ARCU Third Party Loan Integration includes the import and mapping service, new database tables, a modified transform-and-load process, and mapping for key third-party loan fields. It also includes training for using this product.

WHAT IT DOES:

- Automatically imports third-party loan data
- Maps key third-party loan fields to an ARCU table
- Combines key loan fields from Episys and third-party loans to integrate throughout ARCU
- Displays the combined loan information on standard ARCU reports
- Retains and purges third-party loan data is on the same schedule as Episys data

WHAT IT DOES FOR YOU:

- Gives management and staff a central repository for all loan data
- Provides critical information for strategic decisions
- Provides training on product use
