

**Centurion Co-Location™ and Continuity Services
with Hosted Failover – Centurion**

Next-Generation Disaster Recovery Solutions

Do you have disaster recovery peace of mind?

BUSINESS VALUE

- Save Money
- Improve Operations
- Reduce Risk

COMPATIBILITY

- Episys®

The landscape of disaster recovery is evolving. No matter if the changes are in the form of regulatory mandates, technology advancements, or increasingly severe weather, you can rest assured that Centurion is a step ahead of your disaster recovery needs. Our solutions are proactive and efficient, offering the dedicated infrastructure and seasoned expertise to get you back in business as quickly as possible.

HOW IT WORKS ...

Centurion Co-Location gives credit unions a secure space in a hardened facility for their redundant hardware platforms. Continuity Services with Hosted Failover – Centurion (CSHFC) provides automated data backup and the capability to quickly switch Episys operations to a secondary server. Credit unions can use either of these services, or link them together for unmatched data protection. Like all Centurion services, these solutions help ensure regulatory compliance and use best practices based on more than 20 years of experience with disaster recovery services exclusively for financial institutions.

SECURE, REDUNDANT HARDWARE ...

Centurion Co-Location enables credit unions to place their redundant hardware platforms in “the mountain” – the industry’s most secure disaster recovery facility located 175 feet underground. Centurion provides redundant power sources, climate control systems, telecommunications, network connectivity, and security and monitoring services. The ability to house hardware platforms in this hardened facility is something that few credit unions can replicate on their own.

FULLY MANAGED DATA REPLICATION ...

CSHFC sends transaction data in near real time to a secondary server owned by Centurion. This data includes; the memo post file, ATM dialog file, and state files: CopyConfig (nightly update of AIX changes, print queues, and Symitar program files); a nightly copy of SYM 000; Remote Tran Logging; and transaction log maintenance. In the event of an unplanned or scheduled outage, a failover system enables the switch to the secondary server that is kept in optimal condition by Centurion technicians.

Centurion Co-Location and CSHFC enable credit unions to proactively protect themselves and their members from business interruptions and financial losses and also comply with related regulatory requirements.

WHAT IT DOES:

- Provides an up-to-date, failover-ready redundant hardware platform.
- Safeguards hardware in the industry’s most secure disaster recovery facility located 175 feet underground.
- Provides redundant power sources, climate control systems, telecommunications, network connectivity, and security and monitoring services.
- Offers regular backup of critical Episys files and data.
- Provides rapid failover to the secondary server in disaster recovery situations.

WHAT IT DOES FOR YOU:

- Helps safeguard any size credit union against disaster-related data loss.
- Minimizes potential business interruptions and the related financial losses.
- Eliminates the need to own, house, maintain, and upgrade redundant hardware platforms.
- Reduces member inconvenience caused by business interruptions.
- Serves as a member attraction and retention tool by offering security and stability.
- Helps ensure compliance with related regulatory requirements.
