

Check Image Retrieval

Interface to Retrieve Check Images
from Third-Party Vendors

Would you like to simplify the way you handle checks from third-party check image vendors?

BUSINESS VALUE

- Improve Operations

COMPATIBILITY

- Episys®

As the landscape of the financial services industry continues to change, credit unions are challenged more than ever to operate more efficiently at the lowest cost possible. Check Image Retrieval provides credit unions with a simple, cost-effective, and secure solution that streamlines third-party check image retrieval.

IT WORKS LIKE THIS ...

The Check Image Retrieval solution streamlines the retrieval of checks from third-party check image vendors. With Check Image Retrieval, check images are conveniently retrieved from a screen similar to that of Episys' Transaction History that displays the last 90 days of account history. Once the transaction has been located, the check image is displayed by clicking on the check number hyperlink.

CHECK SEARCH CRITERIA ...

Check Image Retrieval allows credit unions to use the following options that provide custom search criteria to help locate a check image:

- Date range
- Transaction history for share/draft within an account
- Checks only, which allows the user to view only transactions involving checks
- Amount range, using a low and high amount

WHAT IT DOES:

- Streamlines the retrieval of checks from third-party check image vendors.
- Allows users to search for specific transactions or for transactions within a date and/or dollar amount range.
- Displays checks through a convenient hyperlink.

WHAT IT DOES FOR YOU:

- Generates material operating efficiencies.
- Enhances customer service and convenience.
- Expedites research by streamlining information access and distribution.
