

Episys HMDA SolutionSM

Easily gather, store, and report home mortgage data

Easily gather, store, and report home mortgage data

BUSINESS VALUE

- ▶ Mitigate Risk
- ▶ Improve Operations
- ▶ Save Money

COMPATIBILITY

- ▶ Episys®

If you're looking for ways to gain efficiency and accuracy in your loan processes, here's a good place to start. Simplify the accurate recording and reporting of Home Mortgage Disclosure Act (HMDA) data with Episys HMDA Solution.

WHAT IT DOES:

This solution automatically captures HMDA information and places it in a clean, consistent format. This reduces mistypes of HMDA data. Users may manually add and update data if needed. The interface requires that the information entered follows regulations and represents all required data – not just the applicants' ethnicity, race, and sex.

Episys HMDA Solution stores the information and gives you the ability to generate a Universal Loan Identifier (ULI). The included Episys HMDA Reporting module is used to generate the extract needed for HMDA Reporting.

Episys HMDA Solution is a standalone product, but also integrates with Enhanced Loan Application.

WHAT IT DOES:

- ▶ Automatically gathers and stores HMDA data
- ▶ Generates a ULI
- ▶ Creates a data extract for reporting

WHAT IT DOES FOR YOU:

- ▶ Reduces typing errors
- ▶ Promotes accurate and complete data gathering
- ▶ Assists with HMDA regulatory reporting
