

## Episys® Monitoring™

Maintain Constant Visibility into Your Episys Ecosystem

## Would you like to maintain constant visibility into the health of your Episys ecosystem?

### BUSINESS VALUE

- Enhance Service
- Mitigate Risk
- Improve Operations
- Save Money

### COMPATIBILITY

- Episys®

System downtime and slow performance are too often addressed from a reactive position. This behavior can severely affect nightly operations and overall efficiency. To address these issues, Symitar® has partnered with SolarWinds® to develop Episys Monitoring.

#### IT WORKS LIKE THIS ...

Episys Monitoring enables you to assess the performance of Episys using a single dashboard view from within the SolarWinds® Server and Application Monitor solution. It monitors critical events in Episys that contribute to downtime, slow response times, and file capacity. It sends instant email notifications of these events, allowing you to address potential problems immediately.

Episys Monitoring can be used with IBM POWER7® or POWER8® systems running Episys.

#### WHAT IT DOES:

- Provides near real-time notifications and alerts
- Monitors:
  - Archive Pairs
  - ATM Turnaround
  - Batch Control
  - Database Warning File
  - Error Report
  - Failover
  - Fatal status
  - File Size
  - Ghost Login
  - Print Queue
  - Replication Services
  - SymConnect Poster
  - SymXchange Instance
  - Tran Log
  - Purge

#### WHAT IT DOES FOR YOU:

- Identifies performance issues, and provides instant alerts
- Promotes optimal system performance
- Provides performance data and historical reporting
- Promotes best practices for system and file retention
- Provides visibility into key events and services running in Episys
