Episys® Vaulting™

Complete Tapeless Backups to Local or
Remote Storage Devices

Would you like the peace-of-mind and simplicity provided by a fast digital backup?

BUSINESS VALUE

‣ Reduce Risk

COMPATIBILITY

‣ Episys®

Episys Vaulting is Symitar's tapeless data backup and recovery solution that enables credit unions to store critical Episys-based data at either a secure off-site location or to an internal storage solution.

Episys Vaulting can provide data recovery in a matter of hours or even minutes.

IT WORKS LIKE THIS …

Episys Vaulting sends a digital backup to the storage solution and/or location of your choice. Even though the backup is digitally vaulted, it gives credit unions the very same tape-style capabilities that Episys requires from a physical tape backup, which is much more comprehensive than disk-to-disk or similar remote or local backup strategies.

ADD UP THE BENEFITS …

Episys Vaulting can provide data recovery in a matter of hours or even minutes, depending upon a credit union's individual needs and network infrastructure. It promotes security and protection by helping to ensure that institutions are in full compliance with NCUA off-site backup requirements. Episys Vaulting also provides a superior audit trail for all backed-up data. The inherent risk associated with physically transporting tapes from one location to another is alleviated. In addition, this automated backup routine allows credit unions' IT resources to dedicate their time to more strategic business objectives.

INTEGRATES WITH JVAULT® …

Episys Vaulting can be packaged with Jack Henry & Associates' Centurion jVault service to provide a complete solution to Symitar clients who use Centurion's disaster recovery services. It eliminates the hours it would normally take to provide a tape to Centurion in the event of a disaster. Episys Vaulting is a vital addition to Symitar's continuity suite for credit unions.

WHAT IT DOES:

‣ Allows credit unions to store tape-style data backups in off-site facilities of their choice or to an internal storage solution

‣ Provides immediate access to and restoration of data

‣ Offers different transmit options (NFS and FTP) and storage options for the created backup (TAR) file

‣ Supports current vaulting strategies

‣ Helps to ensure full compliance with related regulatory requirements

‣ Provides a superior data audit trail

WHAT IT DOES FOR YOU:

‣ Saves money by replacing tapes and/ or offsite storage service

‣ Ensures that mission-critical information is securely protected and readily accessible

‣ Expedites the data recovery process

‣ Reduces the likelihood that unexpected disasters or business interruptions will impact financial transactions

Episys Vaulting is a vital addition to Symitar's continuity suite for credit unions.
