

PowerOn Marketplace®

Shared PowerOn® Solutions for the Symitar® Community

Would you like to try PowerOn solutions created by other credit unions, or to share your own?

BUSINESS VALUE

- Save Money
- Improve Operations
- Enhance Service

COMPATIBILITY

- Episys®

What is the PowerOn Advantage?

PowerOn enables users to create "specfiles." These sets of instructions in scripting language create a specific result involving Episys data or actions. The actions occur within the core system, but independent of the core code. Most of the customization created with PowerOn falls into one of six areas: data integration, workflow scripting, peripheral integration, data entry and transaction validation, email generation, and NetTeller® Online Banking™ customization.

IT WORKS LIKE THIS ...

PowerOn enables credit unions to enhance their Episys® core systems. Users can customize Episys so it performs operations that *they* want in a way that *they* prefer. The PowerOn Marketplace is an online community where you can find or offer customized solutions. Credit unions, vendors, and CUSOs can submit solutions.

A unique feature of the Marketplace is that you may charge a fee for your solution. For credit unions, this is non-interest income that can defray the cost of hours of development time and earn a profit. For vendors, it's a place to reach potential customers and to learn about credit union needs.

The Marketplace is a dynamic environment for sharing ideas. You can search the Marketplace for solutions that meet your specific requirements, and if there is not a published solution that matches your search, you can post a request for it. Participants can also receive a regular newsletter that updates them about the latest solutions made available.

When you find a solution you want, download a .zip file of the scripting code and a documentation file. Once you've tried it, you can post a rating and review to help guide other participants. For vendor-submitted solutions, the vendor provides technical support. For credit-union-submitted solutions that have a fee, support may be provided by the institution or by Symitar.

BUILT-IN QUALITY CONTROL ...

Symitar validates each submission for safety and usability before it is made available. The rating system enables you to see at a glance the top rated and most downloaded solutions. There is also a highlighted Editor's Choice solution each month.

The Marketplace provides a one-stop shop for creative solutions and offers an open community to share ideas.

WHAT IT DOES:

- Provides an easy way to find customization solutions for Episys
- Enables credit unions, CUSOs, and vendors to charge a fee for solutions or to share them for free
- Provides user ratings and the number of downloads for solutions
- Provides a newsletter notifying users of new submissions
- Enables users to post requests for specific solutions

WHAT IT DOES FOR YOU:

- Saves time and money that would otherwise be spent developing your own solution
- Creates a potential income source if you charge for a solution you created
- Provides a community for Episys users to share ideas
