

Repossession Scripted FM

Capture repossession data in tracking records

BUSINESS VALUE

- Save Money
- Improve Operations

COMPATIBILITY

- Episys®

This product is part of Symitar's Collections Toolkit (CTK). It provides near real-time capture of repossession information in a tracking record.

IT WORKS LIKE THIS ...

CTK Repossession Scripted FM provides an HTML interface that enables users to capture and maintain repossession information in a Collection Package Work Card Tracking record. It creates Collection Work Card and Collection Work Card Note records.

The product adds and removes account and level warnings. CTK Repossession Scripted FM produces a status report for all repossessions, and a report of all active repossessions sorted by the repossession or auction company.

The product adds and removes account and level warnings, and updates share/loan credit reporting fields.

WHAT IT DOES:

- Provides near-real-time capture of repossession data
- Creates Collection Work Card and Collection Work Card Note records
- Adds and removes account and loan level warnings
- Produces a status report and a report of active repossessions, sorted by company

WHAT IT DOES FOR ME:

- Simplifies collections by quickly and clearly presenting relevant data in the interface, and in reports
- Saves time and labor by creating records and warnings
