

## VDI Proof of Concept

Curious about VDI? Give it a try.

Get an in-house Virtual Desktop Infrastructure (VDI) demo without buying hardware or licenses.

Symitar is convinced of the value offered by VDI, but we understand a credit union's reluctance to dive in without seeing it in action on its own turf. Who wants to invest in the equipment and software until you know that it's going to work the way you want it to work? That's why we developed the VDI Proof of Concept.

### TAKE IT FOR A TEST DRIVE

VDI Proof of Concept lets you evaluate the technology on your own terms on your own site. We make it easy so your IT staff doesn't need to take on another project. This is how it works:

- Symitar oversees the installation of VDI servers on a virtual host, configures the VDI, and then sets up the endpoints. We either work with your staff remotely to implement the solution, or come to your site and perform the complete installation.
- We use existing equipment at your site, and existing PCs as endpoints.
- We install demonstration software that does not require licensing.
- You only pay for the consulting and installation time.
- If you decide to move forward with VDI, we can begin with your proof of concept and continue to roll out VDI in your credit union.

### DETAILS AND NEXT STEPS

When the proof-of-concept installation is complete, we provide enough training for you to manage the VDI solution for testing purposes. Then you can evaluate the advantages. Symitar technicians can help ensure that you get the most from your demonstration.

If you decide against VDI, you can move the test equipment back into your network and end the testing with very little capital outlay. If you decide to implement VDI, we'll help you take the existing test installation and implement it on your live network. We offer options for implementation, from assisting your IT staff remotely to providing complete turnkey installation.

### MAKE IT HAPPEN

Email [askus@symitar.com](mailto:askus@symitar.com) to get started with VDI today. We'll schedule a call with your staff to discuss what you'd like to accomplish and begin the installation process within weeks.
